

# Inteligencia

With support from  
Google.org

## Building AI readiness across education, workforce, and public sector systems

Inteligencia expands access to artificial intelligence education by equipping young people, educators, and public sector professionals with the knowledge and skills needed to understand, use, and navigate AI responsibly. Supported by Google.org, the program delivers free, self-paced learning experiences designed to build confidence in AI, strengthen digital competencies, and prepare participants to adapt to a rapidly changing technological landscape. Rather than creating parallel structures, Inteligencia works alongside existing systems, supporting institutions in integrating AI into how they teach, operate, and make decisions. By reaching educators who integrate AI concepts into their teaching practices and public sector professionals who shape service delivery, the program strengthens capacity beyond individual participation. By prioritizing regions where access to digital opportunities has been historically limited, Inteligencia contributes to broadening participation in the digital economy and ensuring that technological transformation reaches further.

### At A Glance

**Location(s):**  
Mexico

**Program Type:**  
Mentor-Supported Pathways to AI Readiness

**Industry:**  
Artificial Intelligence

**Key Elements:**  
AI Literacy, Responsible AI Use, Future-Ready Skills, Digital Inclusion, Educator Training, Public Sector Innovation, Accessible Learning, and Economic Opportunity.

### By The Numbers

**42,000+**  
participants

**93%**  
of public servant completers report AI being useful for their work

**978**  
educators trained to replicate the model, strengthening local capacity to serve youth

**"Today, my students are more aware and intentional in how they use technology, and as teachers, we are evolving to guide them in that process better."**

– Benjamin Escarpulli, public high school teacher in Chiapas, Mexico
